2/10 Meeting Minutes

Attendance:
- Abdala Aljiewarane
- Rafid Nasery
- Paola Isabel
- Neon Zheng
- Jonathan Lee
- Billy Nguyen

Meeting:

Rafid came up with the context to feed into an LLM

General milestones to achieve:
1) Repo + CI + Environments Ready
- GitHub rules, CI checks, env management, Supabase + Vercel projects created.

2) Auth Working End-to-End
- Mobile signup/login/logout, profile row, RLS baseline enforced.

3) Friends System MVP
- Add friend (simple flow), list friends, validation.

4) Session Creation + Lobby
- Create session with selected friends, join session, participants update.

5) Location Capture + Midpoint Calculation v1
- Users share location; backend computes meeting area reliably.

6) Restaurant Discovery v1
- Session gets a stable Yelp candidate list (same list for all users), paginated.

7) Swiping v1 (Persisted)
- Swipes stored in DB; state consistent across all members.

8) Match Detection + Notification
- Unanimous right-swipe triggers match; everyone sees Match Found; session ends.

9) Session History + Basic Polish
- Past matches visible; UX smooth enough for a demo.

10) Security + Reliability Pass
- RLS locked down, backend protected, Yelp caching/rate-limits, error handling.

11) Demo-Ready Release Build
- Expo EAS build ready + docs complete + demo script prepared.

Team Assigned Roles:

Tech Lead / Architecture
Neon Zheng

Backend Setup
Abdala Aljiewarane

Mobile Setup
Billy Nguyen

UI/UX Frontend
Paola Isabel

Yelp Integration
Jonathan Lee

DevOps / GitHub PM
Rafid Nasery
